

Nipofos Olivo

NPK FERTILIZER WITH MICROELEMENTS

The range of products **NIPOFOS OLIVO** is comprising a series of solid fertilizers in the shape of crystalline dust. By the quality of their commodities they are of fast and total solubility, being exempt of chlorine, and contributing the primary elements and microelements necessary for the development and growth of the plant. The penetrating agents that incorporates in their formulation favour the action of the macro and micronutrients inside the olive, improving their production and the content in oil. Its stable formulation favours the leaves development at the beginning of sprouting.

FORMULAS

NIPOFOS OLIVO 24-24-12

NIPOFOS OLIVO 19-19-19

NIPOFOS OLIVO 8-44-12

NIPOFOS OLIVO 12-5-36

WAY OF APPLICATION

NIPOFOS OLIVO can be used in any type of cultivation to the concentration of 5-10 gr/L. Several applications during the sprout period can be carried out. The most adequate epoch of application is at the beginning of sprouting, to favour the development of the yolks and new bud.

COMPATIBILITY:

NIPOFOS OLIVO is compatible with Prays treatments.

Before carrying out a mixture some tests of compatibility should be done.
